

DIAMOND, optical fragmentation

Design Paolo Ulina and Moreno Ratti

Diamond, design by Paolo Ulian and Moreno Ratti for Kreoo, is a washbasin characterized by the fragmentation of the optical surface: a visual game of geometries that cross the hard surface of the marble.

Diamond was born by the iconography of the typical gemstone, with a clear triangular cut that creates different facets and that, like a diamond, comes in various shapes and sizes .

Available in different colors, Diamond comes in two sizes, diameter 50 cm and 18 in height, 45 cm diameter and 15 in height.

A further peculiarity of the washbasin is that for both measurements has been studied a more inclined one, for a contemporary design or to facilitate the use, using the facet as a base, and giving visual lightness to a material that is historically heavy.

DATA SHEET

Name: Diamond

Design: Paolo Ulian and Moreno Ratti

Azienda: Kreoo

Diamond is a washbasin characterized by the fragmentation of the optical surface: a visual game of geometries that cross the hard surface of the marble

Size: Ø 50, Ø 45, h 18, 16 cm.

Material proposed: All marbles in Kreoo catalogue.

Finiture: polish or matt, on request
